

Chewing Gum Bin

Chewing Gum related issues are costing local authorities over £150 million each year to clean up!

The JRB GUMSTOP Bin has been specifically designed for the disposal of unwanted chewing gum. The GUMSTOP solution is intended as a preventative tool in the fight against gum pollution and to help teach chewing gum lovers to chew more responsibly.

Gum Bin

The bins are manufactured from heavy gauge galvanized steel and then powder coated in a bright yellow for further protection. The bin opening is large enough for quick, easy and hygienic disposal of chewing gum but not big enough to be filled up with other larger trash items and detracting from its purpose. Maintenance of the bin is also simple and clean, unlock the front cover and remove it, tip the contents of the bin including the inner liner into your waste receptacle, insert a new liner close and replace the front cover.

The durable design of the Gum Bin make it ideal for positioning anywhere including, bus stops, train stations, schools, doctor's surgeries, shopping precincts etc.

It's a Fact They Really Do Work - In all trial cases chewing gum deposits were far fewer around areas where we installed the bins, whilst this did not eradicate the whole problem it meant that cleaning these areas was far less frequent and took far less time. This time saving alone was saving thousands of pounds not to mention the lesser use of chemicals used in some cases to un-stick the gum
